

# PRODUCTS & SERVICES GUIDE

## Custom Cable Assemblies

For power, data, control. Any application, environment or equipment. We source **cable, terminations and connectors** from all over the globe. **Special cable geometries** and electrical properties can be designed and manufactured to the most demanding specs.

One-offs or high volume manufacturing are readily available.

## Custom Wire Harnesses

Whatever your application, we can produce harnesses to spec. Here also, we have global resources from which to draw for components of your choice.

Also, should you wish to **outsource only wire and strip functions** for your own manufacturing needs, we have high-speed and exceptional quality state-of-the art Schleuniger™ equipment to help you reduce costs.

## Cable Protection & Management Solutions

Whether you **need high-temperature wraps, convoluted conduit, shielding systems** or any other way to protect or manage your cable assemblies, we have a wide range of solutions for you. From simple tie-wraps to high-end strain reliefs and Kellum grips, call Electricomm first.

## Custom Panel & Box Builds

If you need a **single special electrical box, panel liner or electrical panel**, or whether your OEM requirements need large volume control panel builds, turn to us with your requirements. We have the facilities, tooling and know-how to give you a competitive advantage.

## Robot Umbilicals & Dresspacks

Chronic breakdowns with your robots? 85% of these are due to power, data and or control cables arcing out because of inadequate mounting, poorly selected materials, and insufficient flexibility. We **specialize in robot dress-pack design and installation**, including the fabrication of hardware, cable and hose umbilical assemblies and preventative maintenance. We also do audits to help you avoid costly breakdowns. Ask about our **"plug-and-play systems"** to replace labour-intensive hard-wired systems. We'll also set you up with tailor-made max-min spares.

## Static Bonding/Grounding Kits

**Neutralize static build-up of electricity** in paint booths, barns, drum storage areas, fueling depots, container transfer and many other applications where static build-up can cause personnel injury and extensive damage to property. Ask about our rugged STATIC BONDING cable and clamp/lug assemblies. These can be configured to your specific requirements and follow IAPA guidelines. We also do complete static and grounding kit installs at your site.

*Located in the heart of southwestern Ontario, Electricomm Technologies Inc. is conveniently located to serve you. With a customer retention quality rating in the high 90 percentiles since our inception in 1988, we take quality, reliability and service responsiveness very seriously. Ask us about third party references and testimonials.*
